

SURYA HARIHARARAMAN

AI and Automation Specialist

Bengaluru, Karnataka, India

<https://www.linkedin.com/in/suryah97> || surya26397@gmail.com || +91 95971 86773

Summary

AI & Automation Engineer with 7 years of experience building enterprise-grade AIOps, orchestration, and AI-driven automation systems across GCP, Azure, and ServiceNow ecosystems.

Work Experience:

Astreya Consultancy India Private Ltd.

Apr 2025 - Present

Senior AI & Automation Consultant

- Architected a scalable LLM-powered (Gemini) data analysis framework generating automated statistical insights across large-scale datasets.
- Engineered an automation assessment tool that reduced landscape assessment time.
- Designed and developed a document assessment solution on ServiceNow using Agentic AI and published the solution in ServiceNow Marketplace.
- Led end-to-end delivery of enterprise automation initiatives across customer environments, improving operational efficiency and reducing manual intervention.
- **Finalist - Google's Agentic AI Day:** Presented an Agentic AI-based financial assistant solution on the topic "Let AI Speak to your Money". The solution was among top 9 teams out of 150.

LTIMindtree, Bengaluru India

Aug 2019 - Apr 2025

Senior Software Engineer/Technical Product Owner

- Designed and deployed a multi-agent IT operations Copilot solution enabling prompt-driven incident handling and automated task orchestration.
- Led a team to deliver an orchestration product and AIOps platform, architected the tool and platform to enable multiple types of automation like workflow, script-based, RPA on an IT environment by practicing SAFe Agile methodology.
- Facilitated training sessions for a cohort of freshers, equipping them with essential skills and valuable insights for over 150 associates.
- Architected and implemented a data-driven solution which analyses recordings made by an engineer on a user's computer or server, including categorising and predicting the category of future incidents.
- Went through an extensive training with LTI consisting of various technologies and core aspects of IT operations and automation using in-house orchestration tools.

Projects:

Certificate Renewal Process Automation: Architected, developed and deployed an automation solution using AWS services for certificate renewal process followed by a customer that reduced operational time from **few hours to less than 3 minutes**.

Data Analysis Tools: Built a scalable data analysis tool that generates automated quality and statistical

reports, **reducing manual effort by 70%** and improving **reporting turnaround time by 80%**, supporting analysis of datasets exceeding 100,000+ records per run.

ServiceNow KB article analyser: Architected and built an Agentic AI-based solution that automatically updates knowledge base articles on a ServiceNow instance, in line with evolving resolution processes, reducing manual update effort from **weeks to minutes** (Available on ServiceNow Marketplace).

Automation Solutions: Developed multiple enterprise automation solutions across customer environments, **reducing operational turnaround time by 60%** and minimising manual intervention across critical processes using multiple orchestration platforms.

Solution Design:

Copilot: Designed a multi-agent architecture, planned and developed the agents for performing IT operations easing process by giving prompts to a copilot. This solution enabled operations engineers to gain real-time insights into ongoing incidents and resolutions.

Orchestrator Platform: Architected an orchestration tool, planned a product roadmap and delivered the product using Azure Cloud environment, Azure DevOps, following SAFe Agile methodology.

Message Router: Enhanced and owned a custom messaging component of AIOps platform to enable smoother and easier communication between tools and components.

Execution Engines: Developed and deployed a PowerShell and Python script execution engine that helps users perform automation on Windows and Linux machines respectively in an IT environment. This was developed as a component of an AIOps platform (An IP of LTIMindtree) using C# and .NET Framework.

Data Integration Plugins: Developed, tested and deployed data plugins for customers for collecting logs and metrics from the customer's applications. The plugin streamlined the data flow from the tools to AIOps platform, enhancing the accessibility of data on the platform.

Solution Recommendation System: Built an AI-driven recommendation engine leveraging incident metadata and session recording analysis to extract resolution patterns, reducing operational resolution time by 30%.

Skills:

Programming Languages: Java, Python, Bash, PowerShell and C#.

Cloud and Platforms: GCP, Azure and ServiceNow.

Tools and Technologies: Docker, Kubernetes, Git, Mulesoft Anypoint Studio, GitHub.

Messaging and Integrations: Apache ActiveMQ, RabbitMQ, REST APIs.

Database: MySQL, ArangoDB (NoSQL) and Postgres.

Others: Agentic AI, LLMs (llama, gemma, GPT-4, Gemini, Claude), Agentic Workflows, Workflow and Runbook (script) Automation, Solution Architecture, Development, Deployment, Orchestration tools, RAG, DevOps, Figma UX Design.

Education:

B.E. Computer Science & Engineering
Sri Ramakrishna Engineering College, Coimbatore, India

Jun 2015 - May 2019
